

CLINT MATHEWS

Senior Backend Engineer - Distributed Systems

mathewsc Clint28@gmail.com | +91 70255 89085 | linkedin.com/in/clint-mathews | github.com/Clint-Mathews

SUMMARY

Backend engineer with 7+ years of experience building high-performance distributed systems for enterprise-scale platforms. Specializes in microservices, Go, and reliability at scale.

TECHNICAL SKILLS

Languages: Go, Python, TypeScript, JavaScript, C#

Backend & Cloud: NestJS, FastAPI, Kafka, BullMQ, Redis, Docker, AWS, GCP

Data: PostgreSQL, MongoDB, MySQL, Redis

Architecture: Microservices, event-driven architecture, circuit breakers, backpressure, async job queues, OCPP, RFC authorship

EXPERIENCE

Ford Motor Company

Aug 2022 - Present

Technical Lead (Senior Software Engineer)

Remote, India

- Led the charging engineering team, co-owning 16 production services across charging and its utilities while coordinating integrations with partner teams.
- Spearheaded migration of 8,200 chargers through a scalable gateway architecture, decommissioning ~2,150 legacy servers (~\$9,000/month savings) and reducing Datadog costs 60%.
- Architected a high-throughput Kafka consumer in NestJS and TypeScript, reliably processing 6M+ fleet charger messages daily at 99.9% data integrity.
- Drove development of a global OCPP simulator that modeled 2,000+ chargers, enabling fleet-scale gateway performance and reliability validation before production.
- Overhauled the ChargeBox charger/session simulator and its test automation, increasing simulation performance 30% and reducing testing time 40%.
- Owned L3 production support for critical services, maintaining 99.95% uptime and driving root-cause analysis for incident resolution.
- Authored foundational RFCs defining OCPP 2.x adoption and core platform services; mentored engineers through rigorous code reviews and technical guidance.

Experion Technologies

Aug 2019 - Jul 2022

Software Engineer

Hybrid, Kochi, India

- Directed technical delivery across 4 enterprise projects, spanning frontend and backend systems, while mentoring teams of up to 10 developers.
- Designed a .NET, Angular, and AWS inventory solution integrated with Sage ERP to track 2,000+ products, contributing to a 25% customer-satisfaction increase.
- Guided React frontend delivery for a B2B platform that scaled to 5,000+ users and supported product sales.
- Built a real-time logistics platform monitoring 1,000+ active shipments and optimizing warehouse scheduling with live dock availability.

PROJECTS

PhotonicOps

Go, gRPC, Protobuf, Docker

Architected a zero-allocation Go ingestion pipeline processing 10,000 samples/sec of real-time sensor telemetry via gRPC, using ring buffers and pooled worker goroutines to limit GC-induced latency spikes.

Fencelock

Go, etcd, Redis, PostgreSQL

Built an open-source Go distributed-lock library around fencing tokens: etcd issues a monotonic token on acquire, and the resource rejects stale writes after a pause-past-TTL.

Jiralyzer

React, Flask, GPT-4

Built a full-stack AI analytics platform over 100,000+ Jira issues with intelligent caching and parallel LLM processing, cutting analysis response time 70%.

AWARDS

Ford Pro Go that Extra Mile Award (2023) | Ford Pro Hackathon Finalist (Q4 2025)

EDUCATION

B.Sc. Computer Science, Mar Athanasius College of Engineering - GPA: 7.88 / 10
